FOCUS	LEVEL	DELIVERY
Quality management skills	Foundation to practitioner	Flexible live online, classroom, or corporate learning

WHAT YOU CAN BUILD

Quality principles Understand the principles that support an effective quality management system.	Process thinking Connect organizational context, risks, processes, evidence, and performance.
Implementation Plan practical actions for documenting, operating, reviewing, and improving a system.	Course clarity Distinguish organizational ISO certification from personal training or auditor credentials.

CURRENT CREDENTIAL GUIDANCE

International Organization for Standardization

ISO publishes management system standards rather than personal ISO 9001 credentials. Choose the learning level, training provider, assessment, and certification route that match your professional goal.

Ask an MTK learning adviser which current provider requirements apply before enrolling or booking an exam.

DETAILED SYLLABUS

Move from foundation to applied preparation.

Shape the syllabus around the selected credential version, delivery option, and learner group.

1	Quality management foundations	Quality principles, customer focus, leadership, engagement, process approach, evidence, improvement, and relationships.
2	Context and leadership	Organizational context, interested parties, scope, policy, responsibilities, and leadership.
3	Planning and support	Risks, opportunities, objectives, resources, competence, awareness, communication, and documented information.
4	Operations and performance	Operational control, monitoring, measurement, internal audit, and management review.
5	Nonconformity and improvement	Corrective action, learning, continual improvement, and sustaining performance.
6	Applied learning	Choose awareness, implementation, internal auditor, or lead-auditor learning with the correct provider and assessment.
